

### HOPS.®- Interstand Touch – Persuade with perfect Interaction

HOPS.®- Interstand Touch is truly an allrounder. A stylish design, an impressive size combined with mobility make HOPS.®- Interstand Touch a perfect AV Medium at fairs, in showrooms, lounges or seminar rooms. The installation is childs play. The holographic screen just has to be mounted with 4 screws at the furniture. Then the projector and the notebook has to be plugged in.

The combination of transparency, daylight capability and the outstanding brilliant and high contrast picture guarantees you an eyecatcher effect. With HOPS.®- Interstand Touch you present your informations in a fascinating and very effective manner and that way distance yourself from usual boring AV media. Holography makes your presentation to an adventure for the senses so that your products and services keep in the customers mind for a very long time.

**Technical description**

HOPS.® - Interstand Touch consists of an interactive holographic rear projection screen, a WT 610 Projektor and a stainless steel furniture. The projection screen can easily be mounted with 4 screws at the stainless steel furniture. Afterwards the projector can be placed on the four given marks (optional the furniture can be produced with holes to mount the projector as well and keep it thief proof) and put into operation. Finally a Notebook or Mini PC can easily be integrated into the system by using a USB cable for the touch foil and a VGA cable for the projector.

In the operating state the projector beams the information provided by a Notebook or Mini PC on the back of the projection screen. Distracting light coming from the viewers side easily falls through unaffected and thereby guarantees a brilliant presentation with a high resolution.

For transport the projection screen and the stainless steel furniture can be stored in the precised manufactured and robust flightcases.
